SUMMARY

Blockchain Engineer / Backend Engineer with 15+ years of software development experience specializing in blockchain, Web3, distributed systems, and scalable backend architectures. Proven track record delivering production-grade smart contracts, high-performance APIs, microservices, and complex cross-chain integrations. Strong adopter of AI-assisted development workflows to accelerate delivery and engineering productivity.

CAREER HIGHLIGHTS

- Blockchain Lead at FightID. Part of the core team that reached the \$FIGHT token TGE and multi-exchange listings across major platforms. Delivered and maintained 6+ production smart contracts powering millions of on-chain transactions.
- Winner of the 2025 Safe Agentathon, achieving 1st place for a DeFi transaction execution API and 3rd place for SafeRocket, an automation framework for secure blockchain operations.
- Contributed to UTE's SMART Grid initiative in collaboration with EDF (France), developing systems for automated electrical network reconnection and fault recovery.
- Transferred The Sandbox's assets system from Ethereum's (L1) to Polygon (L2), introducing significant and disruptive economics improvements.
- Delivered a fully booked technical workshops

CAREER BACKGROUND

SpaceDev – Global | Blockchain Engineer | April 2024 – Present

Contributing to multiple projects involving blockchain integrations, smart contracts development and web3 technologies.

- **UFC Strike and FIGHTID:**
Led multi-chain development across EVM and Solana, delivering production-grade smart contracts, backend API integrations, and complex Web3 infrastructure for large-scale community engagement. Architected and executed the migration of 1.5M NFTs and 100k wallets from Flow to Aptos, ensuring secure burn-and-mint operations without failures. Also designed and implemented high-quality digital asset collections and metadata systems on Aptos.
- **Short-term projects:**
Migrated the ApeBond vesting bond system from EVM to Solana using Rust and Anchor, based on the EIP-5725 standard. Developed a permissioned ERC20 wrapper using Solidity/Hardhat.
- **Acme** (April 2024 – February 2025):
Played a key role in developing a startup focused on enabling users to trade without the need for wallets. Led the integration of multiple tools, including Jupiter, Li.Fi, and deBridge, to facilitate cross-chain EVM/Solana purchases. Worked with Web3Auth, Thirdweb, Safe, Cloudflare, and a tech stack including TypeScript and React to create a seamless user experience.

The Sandbox – Global | Blockchain Integrations Engineer | Jul 2022 – Apr 2024

- Worked as a Senior Backend Engineer developing complex features for the company's main API and contributing to blockchain initiatives through smart contract integrations and EVM ecosystem

development. Utilized technologies including Solidity, Hardhat, Web3, Ethers, IPFS, The Graph, OpenZeppelin, MetaMask, Tenderly, Alchemy, and Infura.

Uruguayan National Administration of Power Plants and Electrical Transmissions (UTE) | Uruguay

Software Engineer | Feb 2014 – Jul 2022

- Developed .NET applications for fault detection, network analysis, reconnection assessment, and power station control, along with tools for process visualization and data analysis. Enhanced SCADA system configurations, managed technical documentation, and performed analytical studies on Big Data systems.

Sonda IT Services | Software Engineer | Nov 2013 – Feb 2014

- During my brief time at SONDA, I made significant contributions to the real estate management system and various data update processes. Afterward, I decided to accept the challenge at UTE.

National Administration of Fuels, Alcohols and Portland (ANCAP) | Software Analyst | Mar 2009 – Nov 2013

- Managed the company's CMS and institutional content systems, developed ESB BizTalk modules, and built internal applications in C#.

EDUCATION

- **Master's Degree in IT Management (Level 9)**
Catolica University, Uruguay. Modeled by Santa Clara University in the United States of America
- **Honors Bachelor Degree in Software Engineering (level 8)**
University of the Republic, Uruguay

Additional Training

Solana Rust Bootcamp (2024) • NestJS Microservices (2024) • Rust Essential Training (2024) • Advanced Solidity Gas Optimization (2023) • Modern GraphQL with Node (2022) • Ethereum & Solidity Developer Guide (2022)

TECHNICAL SKILLS

Key Strengths

- **Languages:** TypeScript, JavaScript, Rust, Solidity, Move, C#
- **Blockchain & Web3:** EVM, Solana, Aptos, Hardhat, Foundry, Anchor, Viem, Ethers.js, Web3.js, OpenZeppelin, IPFS, The Graph, Smart Contracts, Cross-Chain Integrations, Tenderly, Alchemy, Infura, Safe, Thirdweb, Li.Fi, deBridge, Jupiter
- **Backend & APIs:** Node.js, NestJS, Express.js, REST, GraphQL, gRPC, Swagger, Microservices, Batch
- **Frontend:** React, Next.js, Vue, Vite
- **Messaging & Processing:** Kafka, BullMQ, Graphile Worker, Redis Stream
- **Databases & Storage:** PostgreSQL, MongoDB, MySQL, SQL Server, Redis
- **Infrastructure & Tooling:** Docker, Cloudflare

LANGUAGES

- Spanish - Native speaker
- English - Fluent - Cambridge English - BEC Vantage International Certification
